Xerox ColorQube 9200 Series

This Technological Innovation Award is presented to Xerox Corporation as recognition for their innovation in expanding Solid Ink Technology from A4 desktop printers to business class multifunctional devices capable of printing at speeds up to 85 pages per minute in color.

Our product testing revealed excellent throughput speeds, in some cases 100% of the rated published speed. In our analysis of the ColorQube 9203, the device exhibited exceptional image quality.

ColorQube customers can expect the speed of laser with the environmental benefits of solid ink. ColorQube 9200 Series customers can also expect less waste and lower energy consumption than laser devices, a critical selling point in today's "greener" market.

Furthermore, the ColorQube 9200 Series offers customers revolutionary jam clearance videos to help even the most inexperienced operator quickly clear misfeeds.

According to Ted Needleman, Senior Director of IATSD, "Xerox's solid ink printers have long been recognized as a unique and effective approach to desktop color printing."

Xerox has taken this proven approach and ramped it up with new print heads and a new controller that permit high-speed, high quality A3 and A4 printing."

About This Document

The purpose of this document is to identify innovative technology. IATSD's test lab reviews dozens of hardware and software solutions each year. Full reports for many are available on our website. Throughout the year, IATSD identifies products, services and/or solutions that we feel are truly innovative and worthy of recognition. Testing and analysis that led to this recognition was not funded by Xerox in any way, shape or form. There are no license fees associated with this document. Contact us to review our full test report.

About IATSD

Founded in 1974, Industry Analysts, Inc. (IA, Inc.) specializes in the imaging industry. IA, Inc. provides "real world" third-party testing using ISO and other commonly accepted standards. We offer product evaluations, market research and focus groups from our offices in Rochester NY and our test lab, Industry Analysts Technical Services Division (IATSD) located in Fairfield NJ. Senior Technical Director Ted Needleman has been testing products for over 30 years and has published more than 4,000 product reviews, columns and articles.
